

Software Technology Track

Welcome to the Software Technology Track of HICSS-35 and welcome to the island of Hawaii.

The software technology has been going through a number of positive changes in recent years, resulting in a rich body of new ideas, solutions, and paradigm shifts. The collection of papers published in this volume is intended to provide a representation of the most recent research in software technology. The papers are organized in different minitracks, which were carefully selected by the track advisory committee. On the following pages, the coordinators of each minitrack provide a summary and an overview of the papers and topics covered in their minitrack. I hope that the presentations of these papers provide a forum for the exchange of the most important and timely ideas.

I wish to express my thanks and appreciation to the advisory committee members and to the minitrack coordinators, who have worked hard to make the software track a success. I also would like to extend my special thanks to the many reviewers who provided valuable insight and comments.
