

Analog & Mixed Signal BIST: Too Much, Too Little, Too Late?

Session Organizer:

William DeWilkins **National Semiconductor** william.dewilkins@nsc.com

Panel Members:

Barry Baril,	Credence	barry_baril@credence.com
Adam Osseiran	IMS	adam_osseiran@ims.com
Fidel Muradali	Agilent	fidel_muradali@agilent.com
Sassan Tabatabaei	Vector 12	stabatabaei@vector12.com
Ken Posse	Teseda	ken_posse@teseda.com
Lee Song	Teradyne	songl@std.teradyne.com

Abstract

This is a special interactive panel for discussion between panel members and the audience around the latest Analog & Mixed Signal BIST techniques. The panel members will give a short introduction of their back rounds and involvements with BIST. The discussion will be opened up to the audience to ask questions, propose new ideas and methods, or to relate their success and failures with Analog BIST, for comment by the panel or other audience members. Topics could include Converter (A/D & D/A), PLL's, and high speed I/O BIST. Additional topics for discussion could include future analog BIST blocks needed, development & implementation barriers, as well as verification & correlation of the BIST Cores.
