

IEEE Computer Society Digital Library (CSDL) subscribers need to activate the IEEE collections in Primo Central and select the appropriate targets in their OpenURL link resolver's knowledgebase.

All IEEE content is available for searching in Primo Central, regardless of whether the library has licensed it. The content is automatically activated when the default activation settings are applied. However, if you do not wish to automatically activate all the Primo Central content that is free for searching, you can individually activate the IEEE collections in the Primo Central registration system.

CSDL subscribers should activate the following two collections:

- IEEE Periodicals
- IEEE Proceedings

To activate these two collections in Primo Central:

- 1) Choose My Client Applications from the My Profile main menu.
- 2) Select your institution.
- 3) Under Selected Client Resource Collections, choose Edit client resource collections.
- 4) Search for 'IEEE' in the search bar or scroll to IEEE Publishing.
- 5) Click on the  button to expand the selection.
- 6) Click on the radio button for each collection you wish to activate.
- 7) Click Done to save activations.

OpenURL Link resolvers have two vital functions in Primo:

- 1) They feed information to Primo Central regarding the institution's subscriptions. This information enables Primo to take into account the availability status of the item and display results accordingly.
- 2) They allow end users to link to the full text of content discovered in Primo Central.

For the link resolver to function properly, it is critical that the appropriate Targets be activated.

Primo customers who subscribe to CSDL and use the SFX link resolver, should select two targets in the Ex Libris SFX KnowledgeBase:

- IEEE Computer Society Digital Library Journals
- IEEE Computer Society Digital Library Proceedings
