2015 Agile Conference
Agile 2015
Table of Contents

Welcome Message from the Chairs..................................................................................................................................................vii
Program Committee and Reviewers..............................................................................................................................................viii

Research Papers

Session 1
Synthesizing Continuous Deployment Practices Used in Software Development .................................................................................1
Akond Ashfaque Ur Rahman, Eric Helms, Laurie Williams, and Chris Parmin
Stakeholder Perceptions of the Adoption of Continuous Integration—A Case Study ..................................................................................11
Eero Laukkanen, Maria Paasivaara, and Teemu Arvonen

Session 2
Understanding Digital Cardwall Usage ...........................................................................................................................................21
Stevenson Gossage, Judith M. Brown, and Robert Biddle
Visual Management and Blind Software Developers .......................................................................................................................31
Avelino Ferreira Gomes Filho and Rodrigo de Toledo

Session 3
The Prevalence of UX Design in Agile Development Processes in Industry .........................................................................................40
Tina Øvad and Lars Bo Larsen
Managing Technical Debt in Software Projects Using Scrum: An Action Research .................................................................................50
Frederico Oliveira, Alfredo Goldman, and Viviane Santos

Session 4
Explaining Agility with a Process Theory of Change .........................................................................................................................60
Michael Wufka and Paul Ralph
Lean CMMI: An Iterative and Incremental Approach to CMMI-Based Process Improvement .................................................................................................................................65
  Amr Noaman Abdel-Hamid and Alaa El-deen Hamouda

Session 5
Agile Communicators: Cognitive Apprenticeship to Prepare Students for Communication-Intensive Software Development .................................................................71
  Shreya Kumar, Leo C. Ureel II, and Charles Wallace

Predicting Release Time for Open Source Software Based on the Generalized Software Reliability Model ............................................................................................................76
  Hironori Washizaki, Kiyoshi Honda, and Yoshiaki Fukazawa

Short Papers
Symbolic Innovation in Agile Transformations .................................................................82
  Doug Rose

The Impact of Human Factors on Agile Projects ..................................................................87
  Aline Chagas, Melquizedequi Santos, Célio Santana, and Alexandre Vasconcelos

Is Agile Portfolio Management Following the Principles of Large-Scale Agile?
Case Study in Finnish Broadcasting Company Yle ...............................................................92
  Maarit Laanti and Mirette Kangas

Development of Complex Software with Agile Method ..................................................97
  Alan Braz, Cecília Mary Fisher Rubira, and Marco Vieira

  Abdul Rauf and Mohammad AlGhafees

A Lean Design Methodology for Business Models and Its Application to IoT Business Model Development ........................................................................................................107
  Masahiro Ide, Yukio Amagai, Mikio Aoyama, and Yasuhiro Kikushina

Author Index ..........................................................................................................................112
