Message from the Security in RFID and its Industrial Applications Workshop Chair

It is my great honour to welcome you to the 1st Workshop on Security in RFID and its Industrial Applications which is held conjunction with the 22nd IEEE International Conference on Advanced Information Networking and Applications (AINA 2008), GinoWan, Okinawa, Japan.

Automated data capture via RFID has become increasingly important in supply chain management and logistics. However, the adoption of this technology raises several issues like Security, Privacy, Cost, Scalability, Reliability, Performance, Deployment and integration with current technologies.

The purpose of this workshop is to establish a platform for discussing the challenges raised by the evolution of RFID and related sensor technologies. It also aims to provide a forum for researchers, practitioners and experts in RFID around the world to present their results and exchange their ideas and experience in this field.

I would like to take this opportunity to express my appreciation to all the committee members, reviewers and authors who contributed to this workshop making it a success.

Once again we welcome you to GinoWan, Okinawa, Japan. We wish you a rewarding and interesting workshop.

Dr. Vidyasagar Potdar
Workshop Chair
