Welcome to ALPIT 2007.

It is our great pleasure to welcome all of you to the 6th International Conference on Language Processing and Web Information Technology held in Luoyang on August 22-24, 2007. This volume contains the papers accepted for presentation at this conference.

As co-chairs, we have three particular objectives for this conference. First, we would like to acknowledge the increasing interest in Language Processing and Web Information Technologies. Second, we would like to build a regional research community that contains universities, industries and other research institutions. Third, we'd like to deal with interesting topics for multilingual input method, and the evolution of web OS Google. You will see the results of our pursuit of these objectives throughout the conference program and its organization. 221 papers were submitted and 105 papers were selected by referees. The papers edited in the proceedings are for presentation by authors from seven countries. They are classified into four professional tracks: Language Processing Technology (LPT), Ubiquitous and Mobile Technology (UMT), Multimedia Technology (MMT), Web Services Technology (WST).

We would like to express here our special thanks to our members of all committees for the hard work of classifying the papers, supporting reviewers, publishing the proceedings, running registration, making local arrangement, and financing, for successfully holding this conference. Their best work will make the conference successful and also ALPIT2007 promote the drastic development. Finally, we would also like to thank Production Editor, Patrick Kellenberger from the IEEE Computer Society for his careful oversight of the production of the proceedings.
