Proceedings

Second Asia-Pacific Conference on Quality Software

10-11 December 2001

Hong Kong

Organized by
Department of Computer Science, City University of Hong Kong, Hong Kong
Centre for Software Engineering, School of Information Technology, Swinburne University of Technology, Australia

Co-Organized by
Information Technology Services Department, The Government of the Hong Kong SAR, Hong Kong

Sponsored by
The British Computer Society (Hong Kong Section)
Hong Kong Computer Society
The Hong Kong Institution of Engineers Information Technology Division
IEEE Hong Kong Section Computer Society Chapter

IEEE
COMPUTER SOCIETY

IEEE
Los Alamitos, California
Washington • Brussels • Tokyo
Message from the General Chair ................................................................. xi
Message from the Program Co-Chairs .................................................. xii
Conference Committees ........................................................................ xiii
Additional Reviewers .............................................................................. xv

Keynote Address I

Professor C.V. Ramamoorthy, University of California, Berkeley, USA

Session 1A: Program Analysis I

[F] Analysis and Implementation Method of Program to Detect Inappropriate Information Leak ............................................................... 5
  R. Yokomori, F. Ohata, Y. Takata, H. Seki, and K. Inoue

[F] Computing Executable Slices for Concurrent Logic Programs ....................................................................................... 13
  J. Zhao, J. Cheng, and K. Ushijima

[F] Exception Analysis for Multithreaded Java Programs ...................................................................................... 23
  S. Ryu and K. Yi

Session 1B: Software Reliability

[F] An Analysis of Software Correctness Prediction Methods .......................................................... 33
  P. Kokol, V. Podgorelec, M. Zorman, M. Šprogar, and M. Pighin

[F] A Fast Algorithm to Compute Maximum Likelihood Estimates for the Hypergeometric Software Reliability Model .................................................. 40
  F. Padberg

  N. Davidson

v
# Session 1C: Software Quality

[F] Incremental Quality Network ........................................................................................................ 59
   S. Coronado and J. Jaén

[F] Strategic Drivers of Software Quality: Beyond
   External and Internal Software Quality .......................................................................................... 65
   R. Fitzpatrick

[E] Using a Coding Standard to Improve Program Quality ............................................................ 73
    X. Fang

# Session 2A: Program Analysis II

[F] Object-Oriented Program Behavior Analysis Based on Control
   Patterns ............................................................................................................................................. 81
   C.-C. Hwang, S.-K. Huang, D.-J. Chen, and D. Chen

[F] A Path-Based Approach to the Detection of Infinite Looping ...................................................... 88
    J. Zhang

# Session 2B: Quality Metrics

[F] Assurance of Conceptual Data Model Quality Based on Early Measures ................................. 97
    M. Genero, M. Piattini, and C. Calero

   Experience Report ............................................................................................................................ 104
    M. Saboe

# Session 2C: Software Development I

[F] Why Software Engineering is Riskier than Ever ........................................................................ 113
    A. Fuller, P. Croll, and O. Garcia

[F] On Prediction of Cost and Duration for Risky Software Projects
   Based on Risk Questionnaire ............................................................................................................ 120
    O. Mizuno, T. Adachi, T. Kikuno, and Y. Takagi
Session 3A: Formal Methods I

[F] Partial Validation of a Design Specification with Respect to Requirements ................................................................. 131
  C. Besse, A. Cavalli, and F. Khendek

[F] Constructing Hardware/Software Interface Using Protocol Converters ................................................................. 141
  S. Qin, Z. Qiu, and J. He

[S] DLOTOS: A LOTOS Extension for Clock Synchronization in Distributed Systems ......................................................... 149
  W. Hassan

Session 3B: Testing I

[F] Optimal Test Profile in the Context of Software Cybernetics .................................................................................... 157
  K.-Y. Cai

[F] Testable Use Cases in the Abstract State Machine Language .................................................................................... 167
  W. Grieskamp, M. Lepper, W. Schulte, and N. Tillmann

  M. Li, A. Rennoch, I. Schieferdecker, D. Witaszek, O. Halabi, A. Vouffou, and A. Yin

Session 3C: Software Development II

[E] Railway Power SCADA System Commissioning “Case Example” ........................................................................ 185
  I. Hampton and K. Lam

[S] Stakeholder Discovery and Classification Based on Systems Science Principles ..................................................... 194
  O. Preiss and A. Wegmann

[S] Quality & People in the Development of Situationally Specific Methods ........................................................................ 199
  S. Young, S. McDonald, H. Edwards, and J. Thompson

[S] A Risk-Driven Design Model for Embedded System ..................................................................................... 204
  Y. Dong and M. Li
End-to-End Integration Testing ................................................................. 211
Raymond Paul, Department of Defense, Washington, DC, USA

Session 4A: Formal Methods II

[F] Incremental Fault-Tolerant Design in an Object-Oriented Setting ........................................ 223
E. Johnsen, O. Owe, E. Munthe-Kaas, and J. Vain

[F] PAFAS at Work: Comparing the Worst-Case Efficiency of Three Buffer Implementations ................................................................. 231
F. Corradini, M. Di Berardini, and W. Vogler

[S] Class and Module in SOFL ........................................................................... 241
S. Liu and J. Dong

Session 4B: Testing II

[F] Combining the Animation and Testing of Abstract Data Types ........................................ 249
T. Miller and P. Strooper

[F] A Selective Software Testing Method Based on Priorities Assigned to Functional Modules ........................................................................ 259
M. Hirayama, T. Yamamoto, J. Okayasu, O. Mizuno, and T. Kikuno

[S] URL-Driven Automated Testing ..................................................................... 268
R. Wen

Session 4C: Process Models and Tools

[F] A Tailored Capability Model for Inspection Process Improvement ................................ 275
I. Tervonen, J. Isakka, and L. Harjumaa

[S] A Path to Virtual Software Inspection ................................................................ 283
L. Harjumaa, H. Hedberg, and I. Tervonen

[S] A Software Factory Model Based on ISO9000 and CMM for Chinese Small Organizations ................................................................. 288
C. Li, H. Li, and M. Li
Session 5A: Requirements Engineering

[F] Requirements Management for the Incremental Development Model .................................................. 295
   Q. Wang and X. Lai

[F] A New Tool to Analyze ER-Schemas ........................................................................................................ 302
   F. Boufares and N. Kraiem

Session 5B: Usability

   A. Seffah, N. Kececi, and M. Donyaee

[F] Comparison of Chinese and Japanese in Designing B2C Web Pages Toward Impressional Usability ........... 319
   J. Hu, J. Zhao, K. Shima, Y. Takemura, and K.-I. Matsumoto

Session 5C: Process Improvement and Assessment

[F] Special Requirements for Software Process Improvement Applied in Teleworking Environments .................. 331
   H. Guo

[S] Priorities of Process Improvement Outcomes Based on Process Capability Levels ................................... 349
   T. Varkoi, M. Lepasaar, and H. Jaakkola

Session 6A: Formal Verification

[F] Formally Modeling and Verifying Ricart&Agrawala Distributed Mutual Exclusion Algorithm .................... 357
   K. Ogata and K. Futatsugi

[F] Towards a Verification of the Rule-Based Expert System of the IBM SA for OS/390 Automation Manager .... 367
   C. Sinz, W. Küchlin, and T. Lumpp

[F] Towards Automatic Verification of Embedded Control Software ............................................................ 375
   N. Bauer and R. Huuck
Session 6B: E-commerce

X. Wang, S.-C. Cheung, and J. Wei

[F] Beyond E-commerce Software Quality: Web Services Effectiveness ................................................................. 397
H.-S. Chiu and C. Yang

V. Gruhn, L. Schöpe, and M. Book

Session 6C: Configuration Management

[F] A Software Product Model Emphasizing Relationships ................................................................. 417
S.-C. Chou and C.-W. Huang

[F] Complex Systems Development Requirements — PDM and SCM Integration ................................................................. 427
I. Crnkovic, A. Dahlkvist, and D. Svensson

V. Fanberg

Author Index ................................................................................................................................................. 445

Please Note: Paper titles are preceded by the symbols [F], [S], and [E], respectively, to denote the categories of the papers: Full paper, Short paper, and Experience report.
