APSEC 2014 Research Papers

Testing I
A Test Scenario Design Methodology Based on Business Context Modeling and Its Evaluation ................................................................. 3
Norifumi Nomura, Yasuhiro Kikushima, and Mikio Aoyama
Test Scenario Generation for Reliability Tactics from UML Sequence Diagram .................. 11
Xiang Qiu and Li Zhang
Test Case Prioritization Based on Information Retrieval Concepts ........................................ 19
Jung-Hyun Kwon, In-Young Ko, Gregg Rothermel, and Matt Staats

Testing II
User Guided Automation for Testing Mobile Apps .......................................................... 27
Xiujiang Li, Yanyan Jiang, Yepang Liu, Chang Xu, Xiaoxing Ma, and Jian Lu
Modeling and Testing of GUIs Using IOLTS .................................................................. 35
Shengbo Chen, Dashen Sun, Huaikou Miao, and Hongwei Zeng
Improving Testing Coverage for Safety-Critical System by Mutated Specification .................. 43
Tingliang Zhou, Haiying Sun, Jing Liu, Xiaohong Chen, and Dehui Du
A Framework for Distributed Testing of Timed Composite Systems .................................................................47

Huu Nghia Nguyen, Fatiha Zaidi, and Ana Cavalli

Verification I

SAT-Based Bounded Software Model Checking for Embedded Software: A Case Study ........................................55

Yunho Kim and Moonzoo Kim

Model Checking of Software Product Lines in Presence of Nondeterminism and Probabilities .............................................63

Mahsa Varshosaz and Ramtin Khosravi

Modeling I

Effect of Model Based Software Development on Productivity of Enhancement Tasks—An Industrial Study ..............................71

Damodaram Kamma and Sasi Kumar G

plML—An Interrupt Program Modelling Language for Real-Time and Embedded Systems ..............................................78

Xin Li, Yanhong Huang, Jianqi Shi, Jian Guo, Huibiao Zhu, and Yuanmin Xu

Formal Modeling and Analyzing the Reliability for Service Composition ...............................................................86

Guisheng Fan, Huiqun Yu, Liqiong Chen, and Dongmei Liu

Modeling II

Early Experience with Model-Driven Development of MapReduce Based Big Data Application ........................................94

Asha Rajbhoj, Vinay Kulkarni, and Nikhil Bellarykar

Modeling Web Attachment Storage for Web Applications .........................................................................................98

Vijay Jain and Amol Kolambkar

A Context-Role Based Modeling Framework for Engineering Adaptive Software Systems ......................................................103

Tetsuo Tamai and Supasit Monpratarnchai

A Model-Driven Approach to Generate Mobile Applications for Multiple Platforms .......................................................111

Muhammad Usman, Muhammad Zohaib Iqbal, and Muhammad Uzair Khan

Analysis I

Predicting Next Changes at the Fine-Grained Level .................................................................................................119

Hiroaki Murakami, Keisuke Hotta, Yoshiki Higo, and Shinji Kusumoto

Synchronization Error Detection of MPI Programs by Symbolic Execution .........................................................127

Xianjin Fu, Zhenbang Chen, Chun Huang, Wei Dong, and Ji Wang
Guidelines for the Use of Function Block Diagram in Reactor Protection Systems ................................................................. 135  
Dong-Ah Lee, Junbeom Yoo, and Jang-Soo Lee

Design I
Traceability-Driven System Development and its Application to Automotive System Development ................................................................. 143  
Hyun Cho
A Lifecycle-Based Design Methodology of the Lightweight Ontology and Its Application to Cultivating High Quality Mandarin Orange ............................................... 147  
Reiko Fujimoto and Mikio Aoyama
Handling Emergency Mode Switch for Component-Based Systems ................................................................. 151  
Yin Hang and Hans Hansson

Design II
Interactive Scalable Abstraction of Reverse Engineered UML Class Diagrams ................................................................. 159  
Mohd Hafeez Osman, Michel R.V. Chaudron, and Peter van der Putten
Context Sensitive Dynamic Slicing of Concurrent Aspect-Oriented Programs ................................................................. 167  
Jagannath Singh, Dishant Munjal, and Durga Prasad Mohapatra
An Efficient Application-Device Matching Method for the Mobile Software Ecosystem ................................................................. 175  
Heuijin Lee, Sungwon Kang, and Myungchul Kim

Architecture and Requirement
Experience on a Microservice-Based Reference Architecture for Measurement Systems ................................................................. 183  
Matthias Vianden, Horst Lichter, and Andreas Steffens
Run-Time Monitoring-Based Evaluation and Communication Integrity Validation of Software Architectures ................................................................. 191  
Ana Dragomir, Horst Lichter, Johannes Dohmen, and Hongyu Chen
Customer Requirements Validation Method Based on Mental Models ................................................................. 199  
Youn Kyu Lee, Hoh Peter In, and Rick Kazman

Empirical Software Engineering
Outliers and Replication in Software Engineering ................................................................. 207  
Henrik Larsson, Erik Lindqvist, and Richard Torkar
An Empirical Study on the Adequacy of Testing in Open Source Projects ................................................................. 215  
Pavneet Singh Kochhar, Ferdian Thung, David Lo, and Julia Lawall
A Novel Developer Ranking Algorithm for Automatic Bug Triage Using Topic Model and Developer Relations .................................................................223
Tao Zhang, Geunseok Yang, Byungjeong Lee, and Eng Keong Lua

Analysis II
Recovery of Object Oriented Features from C++ Binaries .................................................................231
Kyungjin Yoo and Rajeev Barua
Process Cube for Software Defect Resolution ..................................................................................239
Monika Gupta and Ashish Sureka
Improving Fuzzy Analogy Based Software Development Effort Estimation .....................................247
Fatima Azzahra Amazal, Ali Idri, and Alain Abran

Verification II
Runtime Verification by Convergent Formula Progression .................................................................255
Yan Shen, Jianwen Li, Zheng Wang, Ting Su, Bin Fang, Geguang Pu, Wanwei Liu, and Mingsong Chen
Reviewing Formal Specification for Validation Using Animation and Trace Links .........................................................263
Mo Li and Shaoying Liu
A Symbolic Partial Order Method for Verifying SystemC ..............................................................271
Naiju Zeng and Wenhui Zhang

Testing III
A Probabilistic Neural Network-Based Approach for Related Software Changes Detection ..................279
Yuan Huang, Xiangping Chen, Qiwen Zou, and Xiaonan Luo
Using Genetic Algorithms to Repair JUnit Test Cases ....................................................................287
Yong Xu, Bo Huang, Guoqing Wu, and Mengting Yuan
Evaluation of Maude as a Test Generation Engine for Automotive Operating Systems .....................295
Yunja Choi, Min Zhang, and Kazuhiro Ogata

Analysis III
Learning Summaries of Recursive Functions .............................................................................303
Yu-Fang Chen, Bow-Yaw Wang, and Kai-Chun Yang
A Tool to Suggest Similar Program Element Modifications .......................................................311
Yujiang Yang, Kazunori Sakamoto, Hironori Washizaki, and Yoshiaki Fukazawa
GAIN: GPU-Based Constraint Checking for Context Consistency ........................................319
Jun Sui, Chang Xu, Wang Xi, Yanyan Jiang, Chun Cao, Xiaoxin Ma, and Jian Lu
Project Management

Factors Affecting the Project Performance of Information Systems Development: Comparison of Organizational Cultures ................................................................. 327
   Tomoyuki Kawamura and Kenichi Takano

Who Should Review this Pull-Request: Reviewer Recommendation to Expedite Crowd Collaboration ............................................................................................................. 335
   Yue Yu, Huaimin Wang, Gang Yin, and Charles X. Ling

A Exploratory Study of @-Mention in GitHub’s Pull-Requests ................................................................. 343
   Yang Zhang, Gang Yin, Yue Yu, and Huaimin Wang

Predicting Time Range of Development Based on Generalized Software Reliability Model ...................................................... 351
   Kiyoshi Honda, Hidenori Nakai, Hironori Washizaki, Yoshiaki Fukazawa,
   Ken Asoh, Kazuyoshi Takahashi, Kentarou Ogawa, Maki Mori, Takashi Hino,
   Yosuke Hayakawa, Yasuyuki Tanaka, Shinichi Yamada, and Daisuke Miyazaki

Verification III

Verifying Secure Interface Composition for Component-Based System Designs ................................................................. 359
   Cong Sun, Ning Xi, Jinku Li, Qingsong Yao, and Jianfeng Ma

Security Weaknesses Detection by Symbolic Analysis of Scenarios ................................................................................................. 367
   Boutheina Bannour, Jose Escobedo, Christophe Gaston, Pascale Le Gall,
   and Gabriel Pedroza

Formal Design and Verification of Zone Controller ................................................................................................. 375
   Jie Qian, Jing Liu, Xiang Chen, and Junfeng Sun

Analysis IV

Mining Developer Mailing List to Predict Software Defects ................................................................................................. 383
   Yu Zhang, Beijun Shen, and Yuting Chen

SHAP: Suppressing the Detection of Inconsistency Hazards by Pattern Learning ......................................................................................... 391
   Wang Xi, Chang Xu, Wenhua Yang, Ping Yu, Xiaoxing Ma, and Jiang Lu

Automatic Classification of UML Class Diagrams from Images ................................................................................................. 399
   Truong Ho-Quang, Michel R.V. Chaudron, Ingimar Samuelsson, Joel Hjaltason,
   Bilal Karasneh, and Hafeez Osman

Runtime Checking for Paired Functions in Device Drivers ................................................................................................. 407
   Jia-Ju Bai, Hu-Qiu Liu, Yu-Ping Wang, and Shi-Min Hu
Testing IV

BP-Miner: Mining Paired Functions from the Binary Code of Drivers for Error Handling ....................................................................................................................................................415

Hu-Qiu Liu, Jia-Ju Bai, Yu-Ping Wang, and Shi-Min Hu

Data Flow Based Integration Testing for Embedded System Using Interaction Model ........................................................................................................................................................423

Hossain Muhammad Iqbal and Woo Jin Lee

An Efficient Method for Assessing the Impact of Refactoring Candidates on Maintainability Based on Matrix Computation ..................................................................................................................430

Ah-Rim Han and Doo-Hwan Bae

A Proved Approach for Building Correct Instances of UML Associations: Multiplicities Satisfaction ..................................................................................................................................................438

Amel Mammar and Régine Laleau

Author Index - Volume 1 ........................................................................................................................446
