Contents

Technical Sessions

Session 1

A Stochastic Model for Video and Its Information Rates .......................................................... 3
Arthur L. da Cunha, Minh Do, and Martin Vetterli†
University of Illinois Urbana-Champaign, †LCAV-EPF Lausanne
Half-Pel Accurate Motion-Compensated Orthogonal Video Transforms ............................... 13
Markus Flierl and Bernd Girod
Stanford University
Spatial Sparsity Induced Temporal Prediction for Hybrid Video Compression .................... 23
Gang Hua and Onur G. Guleryuz†
Rice University, †DoCoMo USA Laboratories, Inc.

Session 2

Normalized Maximum Likelihood Model of Order-1 for the Compression of DNA Sequences ..................................................................................................................... 33
Gergely Korodi and Ioan Tabus
Tampere University of Technology
A Simple Statistical Algorithm for Biological Sequence Compression ................................... 43
Minh Duc Cao, Trevor I. Dix, Lloyd Allison, and Chris Mears
Monash University
Structure Induction by Lossless Graph Compression ............................................................. 53
Leonid Peshkin
Harvard University

Session 3

Multiple-Description Coding by Dithered Delta-Sigma Quantization ................................... 63
Jan Østergaard and Ram Zamir†
Delft University of Technology, †Tel Aviv University
Multiple Description Coding for Stationary and Ergodic Sources ........................................ 73
Jun Chen, Chao Tian†, and Suhas Diggavi†
IBM T. J. Watson Research Center, †Swiss Federal Institute of Technology
Lossless Transmission of Correlated Sources over a Multiple Access Channel with Side Information ................................................................. 83
Deniz Gündüz and Elza Erkip
Polytechnic University, Brooklyn, NY
Distributed Functional Compression through Graph Coloring ..............................................93  
Vishal Doshi, Devavrat Shah, Muriel Médard, and Sidharth Jaggi  
Massachusetts Institute of Technology

Session 4

Differential Compression of Executable Code .................................................................103  
Giovanni Motta, James Gustafson, and Samson Chen  
Bitfone Corporation

Compressed Delta Encoding for LZSS Encoded Files .....................................................113  
Shmuel T. Klein and Dana Shapira†  
Bar Ilan University, †Ashkelon Academic College

Simple Linear-Time Off-Line Text Compression by Longest-First Substitution ...............123  
Ryosuke Nakamura, Hideo Bannai, Shunsuke Inenaga,  
and Masayuki Takeda  
Kyushu University

Bounds on Redundancy in Constrained Delay Arithmetic Coding..................................133  
Ofer Shayevitz, Eado Meron, Meir Feder, and Ram Zamir  
Tel Aviv University

Session 5

Distributed Grayscale Stereo Image Coding with Unsupervised Learning of Disparity .................................................................143  
David Varodayan, Aditya Mavlankar, Markus Flierl, and Bernd Girod  
Stanford University

Edge-Based Prediction for Lossless Compression of Hyperspectral Images..................153  
Sushil K. Jain and Donald A. Adjeroh  
West Virginia University

Spectral Predictors ..............................................................................................................163  
Lorenzo Ibarria, Peter Lindstrom†, and Jarek Rossignac  
Georgia Institute of Technology, †Lawrence Livermore National Laboratory

On Compression of Encrypted Video ................................................................................173  
Daniel Schonberg, Chuohao Yeo, Stark C. Draper†, and Kannan Ramchandran  
University of California, Berkeley, †Mitsubishi Electric Research Laboratories

A Parallel Decoder for Lossless Image Compression by Block Matching ........................183  
Luigi Cinque and Sergio De Agostino  
La Sapienza University

Session 6

Image Coding on Quincunx Lattice with Adaptive Lifting and Interpolation...............193  
Xiangjun Zhang, Xiaolin Wu, and Feng Wu†  
McMaster University, †Microsoft Research Asia
Improved Resolution Scalability for Bi-level Image Data in JPEG2000 ........................................... 203

Rahul Raguram, Michael W. Marcellin, and Ali Bilgin
University of Arizona

Memory-Efficient Image Codec Using Line-Based Backward Coding of Wavelet Trees ................................................................. 213

Linning Ye, Jiangling Guo†, Brian Nutter, and Sunanda Mitra
Texas Tech University, †Beijing Institute of Technology at Zhuhai

Nonuniform Compression in Databases with Haar Wavelet .............................................................. 223

S. Chen and A. Nucci†
Rutgers University, †Narus, Inc.

Four-Dimensional Wavelet Compression of 4-D Medical Images Using Scalable 4-D SBHP .................. 233

Ying Liu and William A. Pearlman
Rensselaer Polytechnic Institute

Session 7

Bayesian Detection in Bounded Height Tree Networks ................................................................. 243

Wee-Peng Tay, John N. Tsitsiklis, and Moe Z. Win
Massachusetts Institute of Technology

On Multi-stage Sequential Coding of Correlated Sources .......................................................... 253

Jia Wang, Xiaolin Wu†, Jun Sun, and Sonyu Yu
Shanghai Jiao Tong University, †McMaster University

High-Rate Analysis of Systematic Lossy Error Protection of a Predictively Encoded Source .................. 263

Shantanu Rane, David Rebollo-Monedero, and Bernd Girod
Stanford University

Session 8

Type-Based Compression of XML Data ......................................................................................... 273

Christopher League and Kenjone Eng
Long Island University

Algorithms and Hardware Structures for Unobtrusive Real-Time Compression of Instruction and Data Address Traces ........................................ 283

Milena Milenkovic, Aleksandar Milenkovic†, and Martin Burtscher†
IBM, Austin, Texas, †University of Alabama in Huntsville, †Cornell University

High Throughput Compression of Double-Precision Floating-Point Data ........................................ 293

Martin Burtscher and Paruj Ratanaworabhan
Cornell University
Session 9

Distortion-Complexity Optimization of the H.264/MPEG-4 AVC Encoder Using the GBFOS Algorithm .......................................................... 303

Rahul Vanam, Eve A. Riskin, Sheila S. Hemami†, and Richard E. Ladner
University of Washington, †Cornell University

Bit Allocation Based on Motion Vector Analysis for H.264/AVC ........................................... 313

Hussain M. Mohammed, Nikolaus Färber, and Herbert Thoma
Fraunhofer Institute of Integrated Circuits

Lossless and Near-Lossless Audio Compression Using Integer-Reversible Modulated Lapped Transforms ..................................................... 323

Henrique S. Malvar
Microsoft Research

Session 10

Exploiting Prior Knowledge in the Recovery of Signals from Noisy Random Projections .............................................................................. 333

Javier García-Frias and Iñaki Esnaola
University of Delaware

Bounds to the Rate Distortion Tradeoff of the Binary Markov Source ......................... 343

Dinkar Vasudevan
Swiss Federal Institute of Technology

Transmission over Slowly Fading Channels Using Unreliable Quantized Feedback ...................................................................................... 353

Siavash Ekhbatani, Farzad Etemadi, and Hamid Jafarkhani
University of California, Irvine

Joint Optimization of Distributed Broadcast Quantization Systems for Classification ........................................................................ 363

Michael A. Lexa and Don H. Johnson
Rice University
**Poster Session**
(listed alphabetically by first author)

Lossless Compression of Colour Video Sequence Using Optimal Prediction Theory – Octopus.................................................................375
   Stefano Andriani†‡ and Giancarlo Calvagno†
   †University of Padova, ‡University of New South Wales
A Distortion Optimal Rate Allocation Algorithm for Transmission of Embedded Bitstreams over Noisy Channels...........................................376
   Amir H. Banihashemi and Ahmad Hatam
   Carleton University
A Modified BISK Algorithm for 3D Dual-Tree Wavelet Transform Coding .................................................................377
   Joseph B. Boettcher and James E. Fowler
   Mississippi State University
Quantization of Sparse Representations..................................................................................................................378
   Petros Boufounos and Richard Baraniuk
   Rice University
Bit Recycling with Prefix Codes ..........................................................................................................................379
   Danny Dubé and Vincent Beaudoin
   Université Laval
Optimal Rate and Power Allocation for Layered Transmission with Superposition Coding.............................................................380
   Farzad Etemadi and Hamid Jafarkhani
   University of California, Irvine
VLR-Based Optimal Positioning of Resynchronization Markers ....................................................................................381
   Yong Fang and Jechang Jeong
   Hanyang University
The Model Based Similarity Metric ........................................................................................................................382
   Lionel Gueguen† and Mihai Datcu††
   †Get - Télécom Paris, ‡German Aerospace Center DLR
Optimal Source-Channel Decoder for Correlated Markov Sources over Additive Markov Channels.....................................................383
   M. A. Haleem and K. P. Subbalakshmi
   Stevens Institute of Technology
Applying Tunstall Coding in the Existing SEED Format for Seismographic Data.........................................................384
   Edwin S. Hong and Shu-Fang Newman
   University of Washington, Tacoma
Power Preserving 2:1 Bandwidth Reduction Mappings..............................................................................................385
   Amir Ingber and Meir Feder†
   Amimon, †Tel-Aviv University
Compression for Low Power Consumption in Battery-Powered Handsets..........................................................386
   Mayumi Kato and Chia-Tien Dan Lo
   The University of Texas at San Antonio
A New Approach to Decoding of BCH and Reed-Solomon Codes
Using Syzygy ...........................................................................................................................387
Il Ho Kim and Hyoung June Ko
Yonsei University
Fast Decoding of Fibonacci Encoded Texts ............................................................................388
Shmuel T. Klein
Bar Ilan University
Comparison of Text Models for BWT .....................................................................................389
Jan Lánský, Katsiaryna Chernik, and Zuzana Vlčková
Charles University
Compression of a Set of Strings ............................................................................................390
Jan Lánský and Michal Žemlička
Charles University
Data Hiding Based Compression Mechanism for 3D Models ...............................................391
Hui Li, Parag Agarwal, and Balakrishnan Prabhakaran
The University of Texas at Dallas
Texture Classification Using VQ with Feature Extraction Based
on Transforms Motivated by the Human Visual System ......................................................392
Antonella Di Lillo, James A. Storer, and Giovanni Motta†
Brandeis University, †Bitfone Corporation
New Fast Search Algorithm for Base Layer of H.264 Scalable Video
Coding Extension .....................................................................................................................393
Livio Lima, Daniele Alfonso†, Luca Pezzoni†, and Riccardo Leonardi
University of Brescia, †Advanced System Technology (AST) - STMicroelectronics
Guided Quaternary Reaching Method for Wavelet-Based Image
Compression ............................................................................................................................394
Xiteng Liu
University of South Carolina
Interference Multispectral Image Compression with Adaptive
Distortion Control in Fourier Domain....................................................................................395
Jing Ma, Chengke Wu, Dong Chen, and Jie Guo
Xidian University
An Efficient Implementation of Adaptive Prefix Coding ........................................................396
Yakov Nekrich
University of Bonn
An Efficient Algorithm for the Inverse ST Problem ..............................................................397
Ge Nong and Sen Zhang†
Sun-Yat Sen University, †SUNY College at Oneonta
Memory-Efficient Decoding of Variable Length Codes for Monotonic Sources .................398
Yuriy A. Reznik
QUALCOMM Incorporated
Practical Binary Adaptive Block Coder ..................................................................................399
Yuriy A. Reznik
QUALCOMM Incorporated
Hyperspectral Image Compression with Optimization for Spectral Analysis ........................................ 400
   *Kameron Romines and Edwin Hong*
   University of Washington, Tacoma

Gaussian Golomb Codes .................................................................................................................. 401
   *Seishi Takamura and Yoshiyuki Yashima*
   NTT Cyber Space Laboratories

Generalized Statistics Framework for Rate Distortion Theory ................................................. 402
   *R. C. Venkatesan*
   Systems Research Corporation

Compression as Data Transformation ............................................................................................ 403
   *Kiem-Phong Vo*
   AT&T Labs, Shannon Laboratory

Advanced Optimizations for VQ Compression on Parallel Systems .............................................. 404
   *Akiyoshi Wakatani*
   Konan University

The Wyner-Ziv Rate-Distortion Function of Multivariate Gaussian Sources and Its Application in Distributed Video Coding ......................................................... 405
   *Peng Wang, Jia Wang, Songyu Yu, Erkang Chen, Xiaokang Yang, and Xiaodong Wang*
   Shanghai Jiao Tong University, 'Columbia University

An Enhanced Robust Entropy Coder for Video Codecs Based on Context-Adaptive Reversible VLC .................................................................................................................. 406
   *Qiang Wang, Debin Zhao, Siwei Ma*, and Wen Gao*
   Harbin Institute of Technology, 'Chinese Academy of Sciences

Samplify: Real-Time Compression for Electronic Measurements .............................................. 407
   *Al Wegener*
   Samplify Systems, Inc.

A Content-Based Robust Mode Decision Scheme for Internet Videophone Applications .................... 408
   *Jin Xu, Limin Sun, and Zhimei Wu*
   Chinese Academy of Sciences

A Fast Lossless Codec of Continuous-Tone Images for Thin Client Computing ......................... 409
   *Chun Yang, Yan Niu, Yubin Xia, and Xu Cheng*
   Peking University

Dictionary-Based English Text Compression Using Word Endings .............................................. 410
   *Jeehong Yang and Serap Savari*
   University of Michigan

Author Index ....................................................................................................................................... 411
