## VALID 1: Testing Techniques and Mechanisms I

- Reusing Component Test Cases for Integration Testing of Retarding Embedded System Components .......................... 1  
  *Abel Marrero Pérez and Stefan Kaiser*
- Fault Models for Neural Hardware ............................................. 7  
  *Amit Prakash Singh, Pravin Chandra, and Chandra Sekhar Rai*
- A Web-Based Application to Verify Open Mobile Alliance Device Management Specifications ........................................ 13  
  *Jose Felipe Mejia Bernal, Paolo Falcarin, and Maurizio Morisio*
- Towards Automated Test Practice Detection and Governance .......................................................... 19  
  *Roy Oberhauser*

## VALID 2: Testing Techniques and Mechanisms II & Work in Progress

- SAT-Based On-Line Fault Isolation in Serial Systems .......................................................... 25  
  *Jinseong Jeon, Sangwon Kim, and Dongkeun Lee*
- Scenario-Based Test Case Generation Using Event-B Models ......................................................... 31  
  *Qaisar Ahmad Malik, Johan Lilius, and Linas Laibinis*
- An Open Real Time Test System Approach ..................................................................................... 38  
  *Nicolas Belanger, Nicolas Favarcq, and Yann Fusero*
VALID 3: Robust Design Methodologies & Defects and Debugging

Is Depth of Inheritance Tree a Good Cost Prediction for Branch Coverage Testing? .................................................................42
  Muhammad Rabee Shaheen and Lydie du Bousquet
Improving TTCN-3 Test System Robustness Using Software Fault Tolerance ...........................................48
  Juho Perälä
Verification and Validation in the Recommended Practice for Integrated Software-Dependent Systems ....................................................................................................................................................57
  Thierry Coq
A High-Level Language and Compiler to Configure the Multi-core Debug Solution (MCDS) .....................................................62
  Jens Braunes and Rainer G. Spallek

VALID 4: Software Verification and Validation I

Security Inspection Scenarios – A Facet of Security .................................................................68
  Alexander Klaus and Frank Elberzhager
An Aspect-Oriented Approach for Assertion Verification .........................................................................................74
  Ulises Juarez-Martínez, Giner Alor-Hernández, Rubén Posada-Gómez, Joaquín Santos-Luna, Juan Miguel Gómez, and Alejandro Rodríguez Gonzalez
Integration Test Order Strategies to Consider Test Focus and Simulation Effort ........................................80
  Lars Borner and Barbara Paech
Using the Testability Analysis Methodology for the Validation of AIRBUS Systems ........................................................................................................................................................................86
  Fassely Doumbia, Odile Laurent, Chantal Robach, and Michel Delaunay

VALID 5: Software Verification and Validation II

Quality of Code Can Be Planned and Automatically Controlled .................................................................92
  Yegor Bugayenko
Stress Testing the Logical Decision Making Server of a Surveillance System ..................................................98
  Mikko Nieminen, Tomi Räty, and Jukka Palokangas
Automated Refactoring Suggestions Using the Results of Code Analysis Tools ....................................104
  Steffen Herbold, Jens Grabowski, and Helmut Neukirchen
Time-Optimal Real-Time Test Case Generation Using Prioritized Time Petri Nets ........................................110
  Noureddine Adjir, Pierre de Saqui-Sannes, and Mustapha Kamel Rahmouni
VALID 6: Software Verification and Validation III & Domain Oriented Testing

Validating the Behavioral Equivalence of TTCN-3 Test Cases .................................................................117
- Philip Makedonski, Jens Grabowski, and Helmut Neukirchen

Tracing Requirements in a Model-Based Testing Approach .................................................................123
- Fredrik Abbors, Dragoș Truşcan, and Johan Lilis

Model-Based Development and Testing of Process-Aware Information Systems .......................................129
- Ronny S. Mans, Wil M.P. van der Aalst, Nick C. Russell, Piet J.M. Bakker, and Arnold J. Moleman

FPGA-Accelerated Baseband Design and Verification of Broadband MIMO Wireless Systems .................................................135
- Amirhossein Alimohammad, Saeed Fouladi Fard, and Bruce F. Cockburn

VALID 7: Diagnosis & System and Feature Testing

A Low-Cost FPGA-Based Test and Diagnosis Architecture for SRAMs .....................................................141
- Stefano Di Carlo, Paolo Prinetto, Alberto Scionti, Joan Figueras, Salvador Manich, and Rosa Rodriguez-Montañés

Diagnosability of Input Output Symbolic Transition Systems ......................................................................147
- Gauvain Bourgne, Philippe Dague, Farid Nouioua, and Nicolas Rapin

Using TMR Architectures for SoC Yield Improvement ...........................................................................155
- J. Vial, A. Virazel, A. Bosio, L. Diilillo, P. Girard, C. Landrault, and S. Pravossoudovitch

Problem Space and Special Characteristics of Security Testing in Live and Operational Environments of Large Systems Exemplified by a Nationwide IT Infrastructure .................................................................161
- Christian Schanes, Florian Fankhauser, Thomas Grechenig, Michael Schafferer, Kai Behning, and Dieter Hovemeyer

Author Index ...............................................................................................................................................167
